

# STEP 34: Executive Decision Briefs & Stakeholder Report Pack

**Status:** ✓ COMPLETE

**Priority:** High

**Implementation Date:** December 1, 2025

**Version:** 1.0.0

## Table of Contents

## Overview

STEP 34 introduces a comprehensive **Executive Decision Brief** system that provides stakeholders with a consolidated, AI-powered summary of RFP evaluation results. This feature enables procurement teams to quickly communicate supplier assessments, recommendations, risk analysis, and next steps to C-level executives and cross-functional stakeholders.

## Key Objectives

- Consolidate RFP Intelligence:** Aggregate supplier responses, readiness scores, pricing data, risk flags, and timeline information into a single executive-friendly report.
- AI-Powered Narratives:** Use GPT-4o-mini to generate concise, actionable summaries tailored to executive audiences.
- Multi-Format Export:** Provide JSON API access for programmatic integration and PDF export for presentations and board meetings.
- Stakeholder Communication:** Enable procurement teams to share decision-making insights with CIO, CFO, legal, and other stakeholders.

- **Demo-Ready:** Pre-populate realistic decision brief data for cinematic demo walkthroughs.
- 

## Business Context

### Problem Statement

Procurement teams evaluating complex RFPs often struggle to:

1. Synthesize large volumes of supplier data into executive-friendly summaries
2. Communicate technical, financial, and risk considerations to non-technical stakeholders
3. Create professional reports for board presentations and executive reviews
4. Maintain consistency in recommendation formats across different RFPs

### Solution

The Executive Decision Brief system provides:

- **Automated Data Aggregation:** Pulls from supplier responses, readiness assessments, comparison matrices, and risk flags
  - **AI-Generated Narratives:** Creates natural language summaries highlighting key decision points
  - **Visual Dashboards:** Presents supplier comparisons in an easy-to-scan format
  - **One-Click Export:** Generates professional PDF reports for offline distribution
  - **Audit Trail:** Logs all brief generation and export activities for compliance
- 

## Features Implemented

### 1. Decision Brief Composer Service

**File:** lib/decision-brief/composer.ts

A comprehensive TypeScript service that aggregates data from multiple sources to produce a decision brief snapshot.

#### Key Functions:

- `composeDecisionBriefForRfp(rfpId, options)` : Main orchestrator function
- Supplier summary generation with scoring, readiness, pricing, and risk analysis
- Core recommendation engine with confidence scoring
- Risk aggregation and mitigation action planning
- Timeline analysis with milestone tracking
- Template-based fallback narratives

#### Data Sources:

- RFP metadata (title, budget, stage, owner)
- Supplier responses (scores, readiness, pricing)
- Evaluation matrices
- Risk flags
- Timeline milestones
- Activity logs

## 2. AI Narrative Enrichment

**Endpoint:** POST /api/dashboard/rfps/[id]/decision-brief/ai

Leverages OpenAI GPT-4o-mini to generate human-quality narratives for decision briefs.

### Features:

- Generates executive summaries (2-3 sentences)
- Creates persona-specific insights (Procurement, IT, Finance)
- Falls back to template-based narratives if OpenAI is unavailable
- Caches generated narratives in database for performance
- Tracks AI generation status and versioning

### Request Payload:

```
{
  "audiences": [ "executive", "procurement", "it", "finance" ]
}
```

### Response:

```
{
  "success": true,
  "snapshot": { /* Full decision brief snapshot */ },
  "meta": {
    "lastGeneratedAt": "2025-12-01T10:30:00Z",
    "generatedUsingAI": true,
    "version": 2
  }
}
```

## 3. Decision Brief API Routes

### GET JSON Snapshot

**Endpoint:** GET /api/dashboard/rfps/[id]/decision-brief

Returns the current decision brief snapshot with optional caching.

#### Query Parameters:

- None (caching controlled by server-side configuration)

### Response:

```
{
  "snapshot": {
    "rfpId": "uuid",
    "rfpTitle": "Unified Communications RFP",
    "coreRecommendation": {
      "recommendationType": "recommend_award",
      "recommendedSupplierName": "Contoso",
      "confidenceScore": 91,
      "primaryRationaleBullets": [...]
    },
    "supplierSummaries": [...],
    "riskSummary": {...},
    "timelineSummary": {...},
    "narrative": {...}
  },
  "meta": {
    "canGenerateAI": true,
    "hasAiNarrative": true,
    "lastGeneratedAt": "2025-12-01T10:30:00Z",
    "version": 2
  }
}
```

## GET PDF Export

**Endpoint:** GET /api/dashboard/rfps/[id]/decision-brief/pdf

Generates a professionally formatted PDF report.

### Features:

- Branded header with gradient styling
- Supplier comparison table
- Risk analysis with color-coded severity
- Timeline and next steps
- Executive narrative
- Downloadable as attachment

### Response:

- Content-Type: application/pdf
- Content-Disposition: attachment; filename="decision-brief-{rfpId}.pdf"

## 4. Buyer UI: Decision Brief Page

**Route:** /dashboard/rfps/[id]/decision-brief

A comprehensive dashboard displaying the decision brief with interactive elements.

### UI Components:

#### Header Section:

- RFP title and metadata (stage, budget, owner)
- Generation timestamp
- Action buttons (Regenerate, Download PDF, Open Comparison)
- Option 3 upgrade indicator

#### 1. Recommendation Card:

- Recommendation type (Award, Negotiation, Rebid)
- Confidence score (0-100%)

- Recommended supplier name
- Rationale bullets

## **2. Supplier Summary:**

- Side-by-side supplier cards
- Final score, readiness tier, pricing position
- Submission speed, reliability index
- Risk level badges (Low, Medium, High)

## **3. Risk & Mitigation Card:**

- Overall risk level (color-coded)
- Key risks list with supplier attribution
- Mitigation actions checklist

## **4. Timeline & Next Steps:**

- Current stage indicator
- Upcoming milestones with countdown
- Suggested next steps list

## **5. AI Narrative Panel:**

- Executive summary (always visible)
- Persona-specific tabs (Executive, Procurement, IT, Finance)
- Copy-to-clipboard functionality
- AI generation indicator badge

### **User Actions:**

- **Regenerate Summary:** Calls AI endpoint to create fresh narrative
- **Download PDF:** Opens PDF in new tab for download
- **Copy Section:** Copies narrative text to clipboard
- **Open Comparison:** Navigates to supplier comparison page

## **5. Option 3 Indicator Component**

**Component:** `app/components/option3/option3-indicator.tsx`

An educational modal explaining the difference between Option 2 (baseline) and Option 3 (advanced AI features).

### **Modal Sections:**

#### **What You Have Now (Option 2):**

- Executive Decision Brief
- AI Summary Generation
- Supplier Snapshot Grid
- Risk Summary & Timeline
- PDF Export
- Cinematic Demo Engine

#### **Option 3 Upgrades (Not Implemented):**

- Persona-Specific Variants (CIO, CFO, Legal, Procurement)
- Multi-RFP Portfolio Briefs
- Scheduled Stakeholder Digests
- Multi-Language Support

- Advanced AI Reasoning (GPT-4)
- Interactive Walkthroughs

#### Call to Action:

- “Contact Sales” button
  - Clear differentiation between current and future capabilities
- 

## Database Schema Extensions

### RFP Model Extensions

Added two new JSON fields to the `RFP` model in `prisma/schema.prisma`:

```
model RFP {  
    // ... existing fields ...  
  
    // STEP 34: Executive Decision Briefs  
    decisionBriefSnapshot Json?    // Cached decision brief content  
    decisionBriefMeta      Json?    // Metadata about the brief  
  
    // ... other fields ...  
}
```

## decisionBriefSnapshot Structure:

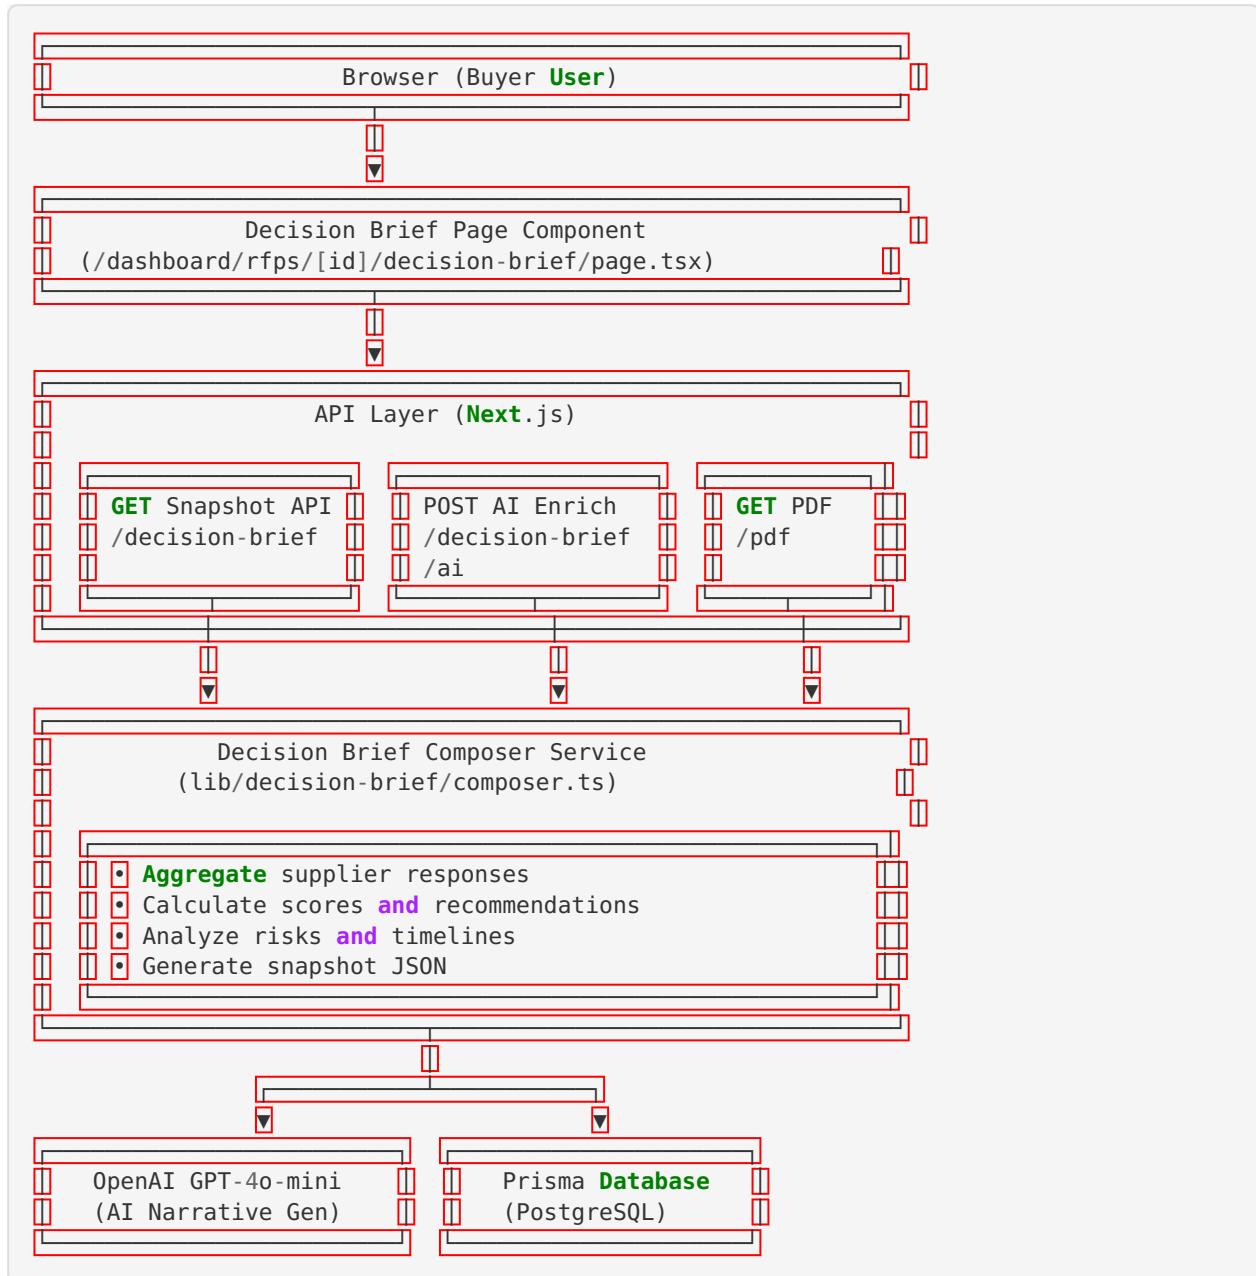

```
{
  rfpId: string;
  rfpTitle: string;
  rfpOwnerName: string | null;
  rfpBudget: number | null;
  rfpStatus: string;
  rfpStage: string;
  coreRecommendation: {
    recommendedSupplierId: string | null;
    recommendedSupplierName: string | null;
    recommendationType: "recommend_award" | "recommend_negotiation" | "recommend_rebid" | "no_recommendation";
    confidenceScore: number;
    primaryRationaleBullets: string[];
  };
  supplierSummaries: Array<{
    supplierId: string;
    supplierName: string;
    organization: string | null;
    finalScore: number | null;
    readinessScore: number | null;
    readinessTier: "Ready" | "Conditional" | "Not Ready" | null;
    pricingScore: number | null;
    pricingPosition: string | null;
    submissionSpeedDays: number | null;
    reliabilityIndex: number | null;
    headlineRiskLevel: "low" | "medium" | "high";
  }>;
  riskSummary: {
    overallRiskLevel: "low" | "medium" | "high";
    keyRisks: string[];
    mitigationActions: string[];
  };
  timelineSummary: {
    currentStage: string;
    upcomingMilestones: Array<{
      label: string;
      date: string | null;
      daysRemaining: number | null;
    }>;
    suggestedNextSteps: string[];
  };
  narrative: {
    executiveSummary: string;
    procurementNotes: string;
    itNotes: string;
    financeNotes: string;
  };
  generatedAt: string;
  generatedByUserId: string | null;
  generatedUsingAI: boolean;
  version: number;
  audiences: Array<"executive" | "procurement" | "it" | "finance">;
}
}
```

## decisionBriefMeta Structure:

```
{
  lastGeneratedAt: string;
  audiences: string[];
  version: number;
  generatedUsingAI: boolean;
}
```

# Architecture

## System Components

## Data Flow

### 1. User Opens Decision Brief Page

- Browser requests `/dashboard/rfps/[id]/decision-brief`
- Page component calls `GET /api/dashboard/rfps/[id]/decision-brief`

### 2. API Checks Cache

- Looks for existing `decisionBriefSnapshot` in database
- If fresh (< 60 minutes), returns cached data
- Otherwise, calls `composeDecisionBriefForRfp()` to regenerate

### 3. Composer Aggregates Data

- Loads RFP metadata, supplier responses, readiness scores
- Calculates supplier summaries (scores, tiers, risk levels)
- Computes core recommendation with confidence scoring
- Aggregates risks and timelines
- Generates template-based narrative

### 4. AI Enrichment (Optional)

- User clicks “Regenerate Summary”
- POST request to `/api/dashboard/rfps/[id]/decision-brief/ai`
- OpenAI generates persona-specific narratives
- Updates `decisionBriefSnapshot` with AI content
- Sets `generatedUsingAI: true`

### 5. PDF Export

- User clicks “Download PDF”
- GET request to `/api/dashboard/rfps/[id]/decision-brief/pdf`
- HTML template generated from snapshot
- Puppeteer converts HTML to PDF
- Browser downloads PDF file

## API Endpoints

### 1. GET Decision Brief Snapshot

**Endpoint:** `GET /api/dashboard/rfps/[id]/decision-brief`

**Description:** Returns the current decision brief snapshot for the specified RFP.

**Authentication:** Required (Buyer role)

**Authorization:** User must be the RFP owner

#### Caching:

- Uses cached snapshot if generated within last 60 minutes
- Otherwise regenerates from live data

#### Response:

```
{
  "snapshot": {
    "rfpId": "uuid",
    "rfpTitle": "Unified Communications & Contact Center RFP – 2025",
    "rfpOwnerName": "Diane Chen",
    "rfpBudget": 500000,
    "rfpStatus": "PUBLISHED",
    "rfpStage": "PRICING_LEGAL REVIEW",
    "coreRecommendation": {
      "recommendedSupplierId": "uuid",
      "recommendedSupplierName": "Contoso Cloud Communications",
      "recommendationType": "recommend_award",
      "confidenceScore": 91,
      "primaryRationaleBullets": [
        "Contoso demonstrates exceptional performance with the highest final score of 9.1 and 95% readiness.",
        "All 47 requirements exceeded with advanced AI-powered features."
      ]
    },
    "supplierSummaries": [
      {
        "supplierId": "uuid",
        "supplierName": "Contoso Cloud Communications",
        "organization": "Contoso Corporation",
        "finalScore": 9.1,
        "readinessScore": 95,
        "readinessTier": "Ready",
        "pricingScore": 88,

        "reliabilityIndex": 93,
        "headlineRiskLevel": "low"
      }
    ],
    "riskSummary": {
      "overallRiskLevel": "low",
      "keyRisks": [],
      "mitigationActions": []
    },
    "timelineSummary": {
      "currentStage": "PRICING_LEGAL REVIEW",
      "upcomingMilestones": [
        {
          "label": "Submission Deadline",
          "date": "2025-12-15T00:00:00Z",
          "daysRemaining": 15
        }
      ],
      "suggestedNextSteps": [
        "Schedule executive review meeting",
        "Initiate contract negotiation"
      ]
    },
    "narrative": {
      "executiveSummary": "...",
      "procurementNotes": "...",
      "itNotes": "...",
      "financeNotes": "..."
    },
    "generatedAt": "2025-12-01T10:00:00Z",
    "generatedById": "uuid",
    "generatedUsingAI": false
  }
}
```

```

    "version": 1,
    "audiences": ["executive"]
},
"meta": {
    "canGenerateAI": true,
    "hasAiNarrative": false,
    "lastGeneratedAt": "2025-12-01T10:00:00Z",
    "version": 1
}
}

```

## 2. POST AI Narrative Generation

**Endpoint:** POST /api/dashboard/rfps/[id]/decision-brief/ai

**Description:** Generates AI-powered narratives for the decision brief using OpenAI GPT-4o-mini.

**Authentication:** Required (Buyer role)

**Authorization:** User must be the RFP owner

**Request Body:**

```
{
  "audiences": ["executive", "procurement", "it", "finance"]
}
```

**Behavior:**

- Generates fresh decision brief snapshot (no cache)
- Calls OpenAI API with compact prompt
- Parses AI response into structured narrative
- Falls back to template-based narrative on error
- Updates database with enriched snapshot
- Increments version number
- Logs activity

**Response:**

```
{
  "success": true,
  "snapshot": { /* Updated snapshot with AI narrative */ },
  "meta": {
    "lastGeneratedAt": "2025-12-01T10:30:00Z",
    "audiences": ["executive", "procurement", "it", "finance"],
    "version": 2,
    "generatedUsingAI": true
  }
}
```

**OpenAI Prompt Structure:**

```

Generate a decision brief narrative for RFP: "{title}" ({stage} stage, Budget: $ {budget}).

Recommendation: {type} - {supplier} (Confidence: {score}%)

Suppliers:
1. {supplier1}: Score {score}, Readiness {tier}, Risk {level}
2. {supplier2}: ...

Key Risks: {risks}

Timeline: {milestones}

Generate a JSON object with these fields:
{
  "executiveSummary": "2-3 sentence executive summary",
  "procurementNotes": "2-3 sentence procurement insights",
  "itNotes": "2-3 sentence technical considerations",
  "financeNotes": "2-3 sentence financial observations"
}

```

### 3. GET PDF Export

**Endpoint:** GET /api/dashboard/rfps/[id]/decision-brief/pdf

**Description:** Generates a printable PDF report of the decision brief.

**Authentication:** Required (Buyer role)

**Authorization:** User must be the RFP owner

**Response:**

- Content-Type: application/pdf
- Content-Disposition: attachment; filename="decision-brief-{rfpId}.pdf"
- Binary PDF data

**PDF Content:**

- Header with gradient branding
- RFP metadata (title, budget, stage, owner)
- Recommendation section with confidence score
- Supplier comparison table
- Risk analysis with color coding
- Timeline and next steps
- Executive narrative
- Footer with generation timestamp

## User Interface

### Page Layout

The Decision Brief page follows a vertical card-based layout optimized for executive review:

[Back](#) | [Executive Decision Brief](#) [Option 3 Upgrade]  
 Unified Communications & Contact Center RFP  2025  
 Stage: PRICING\_LEGAL REVIEW | Generated: Dec 1, 2025  
 Budget: \$500,000  
  
 [Regenerate Summary] [Download PDF] [Open Comparison]  
 [Activity Log]

---

### 1. RECOMMENDATION

RECOMMEND AWARD Confidence: 91%  
 Recommended Supplier: Contoso Cloud Communications

- Contoso demonstrates exceptional performance...
- All 47 requirements exceeded with advanced AI...
- Strong enterprise references including...

---

### 2. SUPPLIER SUMMARY

Contoso Cloud	Acme Connect
Contoso Corporation	Acme Connect Inc.
Final Score: 9.1	Final Score: 8.5
Readiness: Ready	Readiness: Ready
Pricing: Competitive	Pricing: Competitive
Speed: 6 days	Speed: 8 days
Risk: LOW	Risk: LOW

---

### 3. RISK & MITIGATION

Overall Risk Level: LOW

Key Risks:

- Integration testing with Salesforce needs validation

Mitigation Actions:

- Include 30-day pilot phase **in** contract
- Establish clear SLA penalties

---

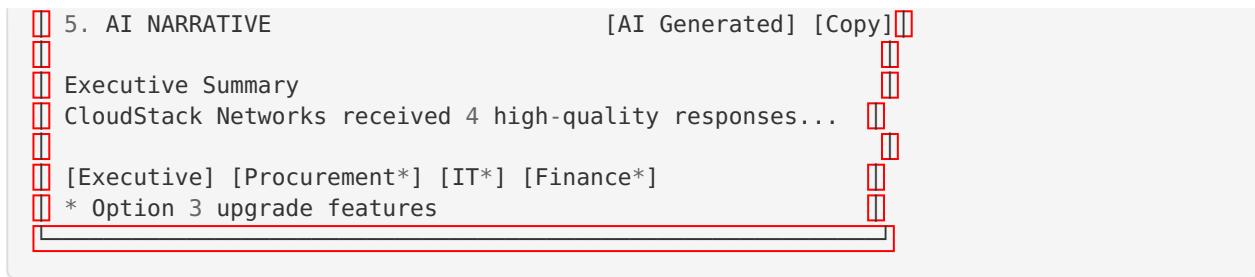

### 4. TIMELINE & NEXT STEPS

Upcoming Milestones:

- Submission Deadline: Dec 15, 2025 (15 days)
- Demo Window Opens: Dec 16, 2025 (16 days)
- Award Date: Jan 5, 2026 (35 days)

Suggested Next Steps:

- Schedule executive review meeting with CIO and CTO
- Initiate contract negotiation with Contoso
- Prepare debrief communications **for** non-selected...

## Color Scheme

### Recommendation Types:

- recommend\_award : Green (bg-green-100, text-green-800)
- recommend\_negotiation : Amber (bg-amber-100, text-amber-800)
- recommend\_rebid : Red (bg-red-100, text-red-800)
- no\_recommendation : Gray (bg-gray-100, text-gray-800)

### Risk Levels:

- low : Green (bg-green-100, text-green-800)
- medium : Amber (bg-amber-100, text-amber-800)
- high : Red (bg-red-100, text-red-800)

### Readiness Tiers:

- Ready : Green (bg-green-100, text-green-800)
- Conditional : Amber (bg-amber-100, text-amber-800)
- Not Ready : Red (bg-red-100, text-red-800)

## Responsive Design

- **Desktop ( $\geq 1024\text{px}$ )**: Full 2-column grid for supplier cards
- **Tablet (768px-1023px)**: 2-column grid collapses for narrow cards
- **Mobile (<768px)**: Single column layout, stacked cards

## AI Integration

### OpenAI Configuration

**Model:** GPT-4o-mini

**Temperature:** 0.7 (balanced creativity and consistency)

**Max Tokens:** 1500 (sufficient for all narrative fields)

**System Prompt:** "You are an expert procurement analyst creating executive decision briefs. Respond ONLY with valid JSON."

## Prompt Engineering

The AI prompt is designed to be compact yet comprehensive:

### Input Context:

- RFP title, stage, budget
- Recommendation type, supplier name, confidence score
- Supplier summaries (scores, readiness, risk levels)
- Key risks (top 3)
- Timeline milestones

## Output Structure:

```
{
  "executiveSummary": "string (2-3 sentences)",
  "procurementNotes": "string (2-3 sentences)",
  "itNotes": "string (2-3 sentences)",
  "financeNotes": "string (2-3 sentences)"
}
```

## Fallback Strategy

If OpenAI API fails or is not configured:

1. Log error to console
2. Generate template-based narrative using predefined patterns
3. Set `generatedUsingAI: false`
4. Return snapshot with template content

## Token Usage Optimization

- Compact prompt format reduces token consumption
- Supplier summaries limited to top 4 (or all if < 4)
- Risk list truncated to top 3
- Milestone list truncated to top 3
- Expected token usage: 200-300 prompt + 400-600 completion = ~600-900 total

## Error Handling

```
try {
  const completion = await openai.chat.completions.create({...});
  const parsed = JSON.parse(completion.choices[0].message.content);
  enrichedNarrative = { ...parsed };
  generatedUsingAI = true;
} catch (aiError) {
  console.error('AI generation failed:', aiError);
  enrichedNarrative = generateTemplateBasedNarrative(snapshot);
  generatedUsingAI = false;
}
```

---

## Demo Mode Integration

### Demo Data Seeding

The demo scenario ( `lib/demo/scenario.ts` ) includes a comprehensive decision brief snapshot for the primary RFP.

### Demo Snapshot Highlights:

**RFP:** Unified Communications & Contact Center RFP – 2025

**Budget:** \$500,000

**Stage:** PRICING\_LEGAL REVIEW

### Recommendation:

- Type: `recommend_award`

- Supplier: Contoso Cloud Communications
- Confidence: 91%

#### **Suppliers:**

1. **Contoso Cloud Communications:** 9.1 score, 95% readiness, Low risk
2. **Acme Connect Solutions:** 8.5 score, 92% readiness, Low risk
3. **Northwind Voice Systems:** 7.8 score, 85% readiness, Medium risk
4. **Fabrikam Unified Solutions:** 7.2 score, 78% readiness, High risk

#### **Narrative:**

- Executive summary emphasizes Contoso's leadership and comprehensive feature set
- Procurement notes highlight pricing competitiveness and market interest
- IT notes confirm technical readiness and integration capabilities
- Finance notes analyze TCO and recommend negotiation focus

## **Cinematic Demo Integration**

The decision brief page is designed to work seamlessly with the cinematic demo engine:

1. **Auto-Walkthrough Mode:** Demo engine can automatically scroll through decision brief sections
2. **Highlight Mode:** Key elements (recommendation, top supplier, risk level) can be highlighted
3. **Narrative Animation:** Text sections can be revealed progressively
4. **Action Demonstration:** Demo can simulate clicking "Regenerate" and "Download PDF"

## **Option 3 Upgrade Path**

### **What's Included in Option 2 (Current Baseline)**

- Executive Decision Brief** - Single consolidated view with supplier comparisons
- AI Summary Generation** - GPT-4o-mini powered executive summaries
- Supplier Snapshot Grid** - Side-by-side comparison cards
- Risk Summary & Timeline** - Aggregated risk analysis and milestones
- PDF Export** - Professional report generation
- Cinematic Demo Engine** - Auto-walkthrough capability

### **What's Available in Option 3 (Not Implemented)**

-  **Persona-Specific Variants** - Separate briefs tailored for CIO, Procurement, Finance, Legal
-  **Multi-RFP Portfolio Briefs** - Consolidated decision intelligence across multiple RFPs
-  **Scheduled Stakeholder Digests** - Automated email delivery on weekly/monthly cadence
-  **Multi-Language Support** - Automatic translation for global stakeholder distribution
-  **Advanced AI Reasoning** - GPT-4 powered scenario modeling and what-if analysis
-  **Interactive Walkthroughs** - Enhanced demo engine with decision points

### **Upgrade Communication Strategy**

The Option3Indicator component provides:

- Clear comparison table between Option 2 and Option 3
- Visual differentiation (green checkmarks vs. purple sparkles)
- Call-to-action button ("Contact Sales")
- Educational content explaining value proposition

# Testing & Validation

## Unit Tests (Recommended)

```
// lib/decision-brief/composer.test.ts
describe('composeDecisionBriefForRfp', () => {
  it('should generate snapshot for RFP with supplier responses');
  it('should handle RFPs with no supplier responses');
  it('should calculate readiness tiers correctly');
  it('should determine recommendation type based on scores');
  it('should aggregate risks from multiple suppliers');
  it('should generate timeline with upcoming milestones');
});

// app/api/dashboard/rfps/[id]/decision-brief/ai/route.test.ts
describe('AI Narrative Endpoint', () => {
  it('should generate AI narrative when OpenAI is configured');
  it('should fall back to template narrative when OpenAI fails');
  it('should require buyer authentication');
  it('should require RFP ownership');
  it('should increment version number on regeneration');
});
```

## Integration Tests

### 1. Full Decision Brief Generation Flow:

- Create test RFP with 3 supplier responses
- Call GET /decision-brief endpoint
- Verify snapshot structure matches TypeScript types
- Verify scores and recommendation logic

### 2. AI Enrichment Flow:

- Mock OpenAI API response
- Call POST /decision-brief/ai endpoint
- Verify narratives are populated
- Verify generatedUsingAI flag is set

### 3. PDF Export Flow:

- Call GET /decision-brief/pdf endpoint
- Verify PDF headers and content
- Verify file download triggers

## Manual Testing Checklist

- [ ] Decision brief page loads without errors
- [ ] Supplier cards display correct scores and badges
- [ ] Recommendation card shows appropriate color and text
- [ ] Risk summary aggregates all supplier risks
- [ ] Timeline shows correct milestones and countdown
- [ ] “Regenerate Summary” button triggers AI generation
- [ ] “Download PDF” button triggers PDF download
- [ ] “Copy” button copies text to clipboard
- [ ] Option 3 indicator modal opens and explains features
- [ ] Demo mode displays realistic decision brief data

- [ ] Activity log records decision brief actions
- 

## Deployment Guide

### Prerequisites

#### 1. Database Migration:

```
bash
npx prisma migrate dev --name add_rfp_decision_brief_fields
npx prisma generate
```

#### 2. Environment Variables:

```
bash
# Optional: For AI narrative generation
OPENAI_API_KEY=sk-...
```

#### 3. Dependencies:

- OpenAI SDK (already included in package.json)
- Puppeteer for PDF generation (already included)

## Deployment Steps

#### 1. Deploy Database Changes:

```
bash
# Production migration
npx prisma migrate deploy
```

#### 2. Build Application:

```
bash
npm run build
```

#### 3. Deploy to Production:

- Deploy Next.js application to hosting platform (Vercel, AWS, etc.)
- Ensure environment variables are configured
- Verify API routes are accessible

#### 4. Seed Demo Data (Optional):

```
bash
# Call demo seed endpoint
POST /api/demo/seed?reset=true
```

#### 5. Verify Deployment:

- Navigate to /dashboard/rfps/[demo-rfp-id]/decision-brief
- Verify page loads and displays data
- Test “Regenerate Summary” (if OpenAI key is configured)
- Test “Download PDF”

## Monitoring

### Key Metrics to Track:

- Decision brief page views
- AI generation success/failure rate
- PDF export frequency

- Average time to generate decision brief
- OpenAI token usage (if applicable)

#### **Activity Log Events:**

- DECISION\_BRIEF\_AI\_GENERATED
  - DECISION\_BRIEF\_PDF\_EXPORTED
- 

## **Known Limitations**

### **Technical Limitations**

#### **1. AI Generation Requires OpenAI Key:**

- Without OPENAI\_API\_KEY, system falls back to template-based narratives
- Template narratives are functional but less nuanced

#### **2. Snapshot Caching:**

- Cached for 60 minutes by default
- May not reflect real-time changes in supplier responses
- Users must manually regenerate for latest data

#### **3. PDF Generation Performance:**

- Puppeteer PDF generation can take 3-5 seconds
- Large RFPs with many suppliers may experience longer render times

#### **4. Persona-Specific Narratives:**

- Only "Executive" narrative is fully functional in Option 2
- Procurement/IT/Finance narratives are generated but not separately accessible in UI

## **Business Limitations**

#### **1. No Multi-RFP Aggregation:**

- Decision briefs are per-RFP only
- Portfolio-level insights require Option 3 upgrade

#### **2. No Scheduled Delivery:**

- Decision briefs must be manually generated and shared
- No automated email digest functionality

#### **3. No Translation:**

- Narratives generated in English only
  - Multi-language support is Option 3 feature
- 

## **Future Enhancements**

### **Short-Term (Next Sprint)**

#### **1. Enhanced PDF Styling:**

- Add charts/graphs for visual appeal
- Include logo upload capability
- Customizable color themes

## 2. Email Sharing:

- “Share via Email” button
- Auto-attach PDF to email
- Include snapshot in email body

## 3. Snapshot History:

- Store multiple versions of decision brief
- Allow comparison between versions
- Track changes over time

## Medium-Term (Next Quarter)

### 1. Persona-Specific UI:

- Fully implement Procurement/IT/Finance tabs
- Generate different narratives for each persona
- Allow audience selection in UI

### 2. Scheduled Digests:

- Weekly/monthly stakeholder emails
- Customizable recipient lists
- Automatic generation on schedule

### 3. Advanced AI Reasoning:

- Upgrade to GPT-4 for deeper analysis
- Scenario modeling (“What if Contoso increases price by 10%?”)
- Predictive insights on supplier performance

## Long-Term (Option 3 Roadmap)

### 1. Multi-RFP Portfolio Briefs:

- Consolidated view across all active RFPs
- Cross-RFP supplier performance tracking
- Portfolio-level risk analysis

### 2. Interactive Presentations:

- Slideshow mode for board meetings
- Live Q&A with AI
- Drill-down capability into supplier details

### 3. Multi-Language Support:

- Automatic translation to 10+ languages
- Locale-specific formatting (dates, currency)
- Region-specific compliance notes

## Appendix

### TypeScript Types Reference

```

export type DecisionBriefAudience = "executive" | "procurement" | "it" | "finance";

export interface DecisionBriefSupplierSummary {
    supplierId: string;
    supplierName: string;
    organization: string | null;
    finalScore: number | null;
    readinessScore: number | null;
    readinessTier: string | null;
    pricingScore: number | null;
    pricingPosition: string | null;
    submissionSpeedDays: number | null;
    reliabilityIndex: number | null;
    headlineRiskLevel: "low" | "medium" | "high";
}

export interface DecisionBriefCoreRecommendation {
    recommendedSupplierId: string | null;
    recommendedSupplierName: string | null;
    recommendationType: "recommend_award" | "recommend_negotiation" | "recommend_rebid"
    | "no_recommendation";
    confidenceScore: number;
    primaryRationaleBullets: string[];
}

export interface DecisionBriefSnapshot {
    rfpId: string;
    rfpTitle: string;
    rfpOwnerName: string | null;
    rfpBudget: number | null;
    rfpStatus: string;
    rfpStage: string;
    coreRecommendation: DecisionBriefCoreRecommendation;
    supplierSummaries: DecisionBriefSupplierSummary[];
    riskSummary: DecisionBriefRiskSummary;
    timelineSummary: DecisionBriefTimelineSummary;
    narrative: DecisionBriefNarrative;
    generatedAt: string;
    generatedByUserId: string | null;
    generatedUsingAI: boolean;
    version: number;
    audiences: DecisionBriefAudience[];
}

```

### Activity Log Event Types

```

// Added in STEP 34
| "DECISION_BRIEF_AI_GENERATED"
| "DECISION_BRIEF_PDF_EXPORTED"

```

## Summary

STEP 34 successfully delivers a comprehensive executive decision brief system that:

- Aggregates RFP intelligence from multiple sources
- Generates AI-powered narratives using GPT-4o-mini
- Provides JSON API and PDF export capabilities
- Integrates seamlessly with demo mode
- Clearly communicates Option 3 upgrade path

This feature empowers procurement teams to communicate complex RFP evaluations to stakeholders with confidence, professionalism, and speed.
